

Consider the automobile data set posted on blackboard. The Automobile dataset has a different characteristic of an auto such as body-style, wheel-base, engine-type, price, mileage, horsepower and many more. In **Python**, answer the following:

1. (5 points) Using the pandas library, read the csv data file and create a data-frame called autos
2. (3 points) Print the first and last five observation of the data set.
3. (4 points) Create a frequency table of the car companies.
4. (4 points) Print all toyota car details.
